

Irium Sponsor Overview

Independent open-source blockchain infrastructure for decentralized, settlement-first commerce.

Support focus

- Open-source development
- Public infrastructure

- Wallets, explorer, and tooling

Open-source development Independent build direction with transparent support goals.	Public infrastructure Explorer, bootstrap, node reliability, and maintenance.	Self-custodial direction No admin override powers or centralized control path.	Settlement-first roadmap Long-term focus on practical decentralized commerce utility.
---	---	--	---

What is Irium Irium is an independent, open-source blockchain project focused on building decentralized, trust-minimized settlement infrastructure. The network is already live and is being developed with a clear long-term direction: strengthen base-layer reliability, avoid admin control or override powers, and build toward practical settlement use cases rather than speculative complexity. - No admin keys - No override powers	What support helps fund Support for Irium helps fund the engineering and public-network work needed to keep the project stable, useful, and growing. - Core protocol development - Explorer, bootstrap, and public infrastructure - Wallet and user experience improvements - Testing, security hardening, and maintenance
--	--

- No freeze or seizure controls
- Objective-only consensus
- Self-custodial ecosystem direction
- Open-source public infrastructure
- Documentation and onboarding
- Deployment, monitoring, and reliability improvements
- Future ecosystem tooling and integrations

Irium is being built as durable public infrastructure: decentralized, self-custodial, and settlement-first.

Support Structure and Contact

A practical support framework for open-source development, public infrastructure, and long-term ecosystem reliability.

Funding goals

\$500/month

Supports basic infrastructure and maintenance for public services such as explorer,

\$1,500/month

Supports ongoing development, wallet and explorer improvements,

\$3,000/month

Supports major implementation work for Phase 1 settlement foundation features and related tooling.

\$5,000+/month

Supports faster delivery, stronger testing, broader tooling, ecosystem support, and long-term network expansion.

Ways to support

- Monthly sponsorship
- One-time contribution
- Infrastructure sponsorship
- Milestone sponsorship
- Ecosystem partnership

Transparency

- Current monthly support level
- Infrastructure costs
- Major expenses
- Completed milestones
- Current development priorities
- Next funding targets

Important note

Contributions made to support Irium are voluntary contributions for open-source development, infrastructure, and ecosystem growth. They do not represent equity, ownership, profit rights, guaranteed returns, or investment contracts. Support for Irium is support for the network and its development, not a promise of financial return.
